

Introduction

You find you need another computer. You look at the latest shiniest machines in the computer mall and you cannot afford even the most basic one. When you realize these computers very often do not come with a word processor, or spreadsheet you realize that the cost of a new computer is far too much. You should also be aware that many new machines come with the Vista operating system and a trial version of Office 2007 word processing and spreadsheet program. To get the full version costs more of your hard-earned money.

For the majority of you reading this you will either be a family looking for more computer power or a business that needs more computers.

For the family there may be a conflict where the children need to do research for their school projects and social interaction with others while the parents need to work on their own e-mails, letters and surfing the net. The conflict can be quite difficult at times. What do you do when the need is there and the budget is not?

In your business, if there is provision for a new computer in the budget for the next financial year but the need is for something now to reduce the pressure on hardworking staff to “hot-desk”. What can you do now to get over the problem?

I believe I have found an option for each of you to obtain a computer for your use. I also think that the family situation the parents will be able to use the computer for themselves, while the children will not want to take over the extra computer for their own use.

Sample from www.ghostwritersinternational.com

Let's look at what is on offer and how we can get it and see if the “new” computer will meet your needs.

You need to realize that anyone who uses this extra computer will need to be prepared to learn some new things as this computer will have differences to the windows or Mac that you have used before, but sometimes you have to learn to change, even when presented with a new version of Microsoft Windows.
